Why an eye exam?

Taking care of your eyes doesn't just mean having clear vision. Your eye care professional identifies both vision correction needs and emerging health issues during your annual eye exam.

Eye exams can detect conditions like diabetes early, thus preventing future unnecessary medical costs.

An eye exam takes less than an hour and consists of quick and simple visual acuity tests.

Unidentified vision problems can cause headaches and dizziness and can hinder learning.

Find an eye care professional at **davisvision.com**, then schedule your eye exam today!

Did you know?

The eye is the only place in the human body where part of your central nervous system is visible. That's why your eye exam is key in detecting early chronic and systemic diseases.
